

## APA-HD25B2

### ASSEMBLY INSTRUCTIONS

*If you plan on installing only one drive with this assembly then skip directly to Step 3.*

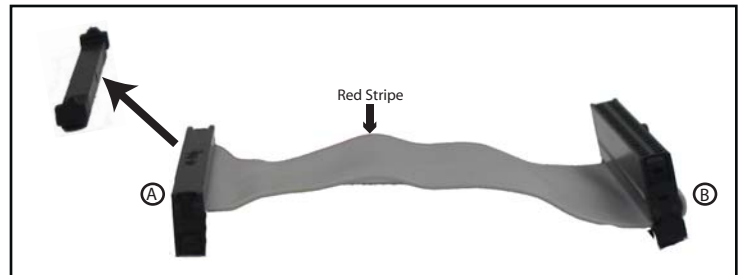

1. The brackets to secure the two drives together are located in the center of the assembly. Carefully remove them by twisting and pulling away from the assembly.

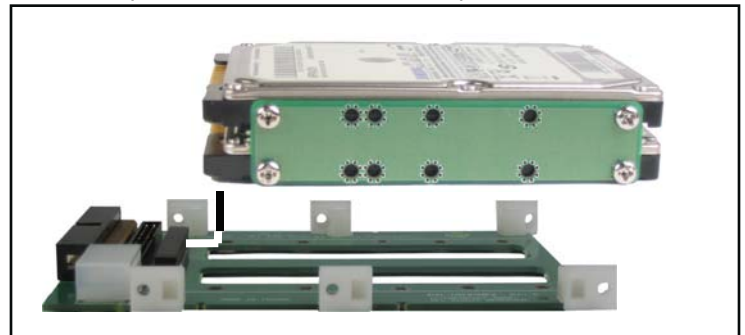

2. Screw the brackets into the sides of the drives with both drives facing the same direction.

3. Remove the binding clip from the A. connector. You may need to break the clip to remove it.

4. Place the drive(s) flat against the bracket and slide it into the IDE port. Screw the drive(s) in place from the bottom.

5. Install the IDE cable between the vertical IDE port and second drive. Make sure to attach the connector with the removed binding clip (A.) to the IDE port of the assembly.
